

SOC Incident Investigation Report

Incident: NetSupport Manager RAT Infection

Severity: High

Analyst: Lakshmeesh R

Executive Summary

SIEM alerts indicated suspected NetSupport Manager RAT activity from external IP 45.131.214.85 over TCP/443. Packet analysis identified the affected Windows workstation, MAC address, hostname, username and full user information using HTTP, LLMNR, Kerberos, SAMR and Ethernet traffic.

Field	Value
External IP	45.131.214.85
Infected IP	10.2.28.88
MAC Address	00:19:d1:b2:4d:ad
Hostname	DESKTOP-TEYQ2NR
Username	brolf
Full Name	Becka Rolf
Protocol	HTTP over TCP/443

Evidence

Victim IP identified through communication with 45.131.214.85. Hostname obtained from LLMNR queries. Username identified from Kerberos CNameString. Full name identified from SAMR QueryUserInfo. MAC address confirmed through Ethernet endpoint statistics.

Indicators of Compromise

45.131.214.85, 10.2.28.88, DESKTOP-TEYQ2NR, brolf, Becka Rolf, TCP/443.

MITRE ATT&CK;

T1219 - Remote Access Software; T1071 - Application Layer Protocol.

Recommendations

Isolate the workstation, block the malicious IP, reset user credentials, acquire forensic images, and hunt for related IOCs across the environment.

Conclusion

The evidence confirms that workstation 10.2.28.88 (DESKTOP-TEYQ2NR), used by Becka Rolf (brolf), communicated with infrastructure associated with NetSupport Manager RAT and should be treated as compromised.
